

Reticle Information - MHP10i

Reticle placement: second focal plane
Unit of measure: mrad (mil)
Subtension correct at: 10X

The MHP10i reticle is an all-round MRAD(MIL) based reticle designed for precision ranging at 10X with fine windage correction reference marks enabling precision target acquisition.

The graphic on the right shows the subtensions in mrad(mil) at 10x. On the upright corner is the blow-up graphic of the center of the reticle.

The MHP10 reticle can also be used to range in other magnifications with calculation as follows:
When range at 5x for example, multiply by 2 on all subtension at 10x.
When range at 12x for example, divide by 1.2 on all subtension at 10x.
